

SAFETY POLICY & OBJECTIVES

A Core Value

Safety is a core value for AIRENKA's operation, not just a priority. Safety encompasses everything from operations, working environment and assets in order to provide effective, efficient and sustainable operation in air taxi environment.

Safety Commitment

AIRENKA is committed to providing the highest levels of safety, security and privacy to our customers and employees at all times.

The Accountable Manager, post holders and employees are all equally committed to supporting, developing on and continuously improving on our integrated management system and upholding the highest safety standard among the Turkish business aviation environment.

Beyond the Compliance

AIRENKA continually works on creating, strategizing, implementing and developing processes to make certain that the company maintains its national and international standards and principles above and beyond the basic requirements as set out by authorities in the industry.

Integrated Management System

In order to achieve high standard of safety and quality in organization, AIRENKA has developed an Integrated Management System (IMS) that actively comprised all levels of the operations. IMS continuously monitor, identify, manage, reduce, or eliminate detectable or foreseeable hazards through a systematic, proactive and data-driven approach. This enables AIRENKA to minimize its exposure to risk and to address potential future challenges, while fulfilling its safety responsibilities to the highest standards.

Safety Culture and Reporting

AIRENKA prompts a safety culture that includes just, learning, flexible, reporting and informed cultures among all managers and employees. All level employees are encouraged to report safety issues at any time and without any disciplinary actions or penalty. Personnel at any level of seniority may report directly to the highest level of seniority. Reports made by employees are evaluated under confidentiality.

Operational Security

AIRENKA develops and implements the processes to prevent acts of unlawful interference that may occur on the ground or during flights and creates security objectives and security performance standards.
